TwoTensor API Usage Guide

1. Obtain an Access Token

Authenticate to obtain an access token for using protected endpoints.

Endpoint:

```
POST https://api.arbmintel.com/token
```

API Documentation

Action:

- Send a POST request to receive an access token, including it in subsequent request headers as `Authorization: Bearer <access_token>`.

Use Case Instructions

A. Searching the Signals of a Specific Company

Analyze investment signals for a specific company.

Endpoint:

```
GET /v1/search/search/project?project_query=
<company_name_or_website>&include_data=true&by_website=
<true_or_false>&full_search=true
```

API Documentation

How to Use:

- Replace `<company_name_or_website>` accordingly.
- Set `by_website` to `true` for URL searches.
- Authenticate your request with the access token.

B. Getting Deal Flow of Their Deal Source

Explore deal flow from a specific deal source.

Endpoint:

```
GET /v1/fund/{uuid}/dealflow/filter?offset=0&limit=10&q=
```

API Documentation

How to Use:

- Substitute `{uuid}` with the fund's unique identifier.
- Paginate with `offset` and `limit`.
- Authenticate your request.

C. Retrieving Signals for a Project

Retrieve detailed signals for a project.

Endpoint:

```
GET /v1/projects/{project_uuid}/timeline?detailed=true
```

API Documentation

How to Use:

- Replace `{project_uuid}` with the project's unique identifier.
- Set `detailed` to `true` for an in-depth analysis.
- Authenticate your request.

D. Retrieving Subscribed Deal Sources (Funds)

Access the list of funds (deal sources) you are subscribed to.

Endpoint:

```
GET https://api.arbmintel.com/v1/user/funds
```

API Documentation

How to Use:

- Use this endpoint to fetch a list of funds you're interested in or subscribed to.
- The response includes details like the fund's UUID, name, website, logo, total signals, and other operational metrics.
- Authenticate your request with the access token.

General Instructions for Use

1. **Obtaining an Access Token:** Start by authenticating to receive a token for access.
2. **Making Authenticated Requests:** Include the access token in the header of each request.
3. **Utilizing the API Response:** Use the data from each endpoint for your analysis needs, whether analyzing company signals, exploring a fund's deal flow, retrieving detailed signals for a specific project, or accessing subscribed deal sources.
